Vermont Castings is a registered trademark of Hearth & Home Technologies.

B. Warranty

Hearth & Home Technologies LIMITED LIFETIME WARRANTY

Hearth & Home Technologies, on behalf of its hearth brands ("HHT"), extends the following warranty for HHT gas, wood, pellet and electric hearth appliances that are purchased from an HHT authorized dealer.

WARRANTY COVERAGE:

HHT warrants to the original owner of the HHT appliance at the site of installation, and to any transferee taking ownership of the appliance at the site of installation within two years following the date of original purchase, that the HHT appliance will be free from defects in materials and workmanship at the time of manufacture. After installation, if covered components manufactured by HHT are found to be defective in materials or workmanship during the applicable warranty period, HHT will, at its option, repair or replace the covered components. HHT, at its own discretion, may fully discharge all of its obligations under such warranties by replacing the product itself or refunding the verified purchase price of the product itself. The maximum amount recoverable under this warranty is limited to the purchase price of the product. This warranty is subject to conditions, exclusions and limitations as described below. **WARRANTY PERIOD:**

Warranty coverage for consumers begins at the date of installation. In the case of new home construction, warranty coverage begins on the date of first occupancy of the dwelling or six months after the sale of the product by an independent, authorized HHT dealer/ distributor, whichever occurs earlier. However, the warranty shall commence no later than 24 months following the date of product shipment from HHT, regardless of the installation or occupancy date. The warranty period for parts and labor for covered components is produced in the following table.

The term "Limited Lifetime" in the table below is defined as: 20 years from the beginning date of warranty coverage for gas appliances, and 10 years from the beginning date of warranty coverage for wood and pellet appliances. These time periods reflect the minimum expected useful lives of the designated components under normal operating conditions.

Warranty Period		HHT Manufactured Appliances and Venting					
Parts	Labor	Gas	Pellet	Wood	Electric	Venting	Components Covered
1 Year		x	x	x	x	х	All parts including handles, external enamaled components and other material except as covered by Conditions, Exclusions, and Limitations listed
			х	х			Igniters, Auger Motors, Electronic Components, and Glass
2 years		х					Electrical components limited to modules, remotes/wall switches, valves, pilots, blowers, junction boxes, wire harnesses, transformers and lights (excluding light bulbs)
		х		х			Molded Refractory Panels, Glass Liners
3 ye	ars		х				Firepots, burnpots, mechanical feeders/auger assemblies
5 years	1 year	х					Vent Free Burners, Vent Free Logs
	. your		Х	Х			Castings, Medallions and Baffles
6 years	3 years			х			Catalyst - Limitations Listed
7 years	3 years		x	x			Manifold tubes, HHT Chimney and Terminations
10 years	1 year	Х					Burners, logs and refractory
Limited Lifetime	3 years	x	x	x			Firebox and heat exchanger, FlexBurn® System (engine, inner cover,access cover and fireback)
1 Year	None	x	х	х	x	х	All replacement parts beyond warranty period

See conditions, exclusions and limitations on the next page

WARRANTY CONDITIONS:

- This warranty only covers HHT appliances that are purchased through an HHT authorized dealer or distributor. A list of HHT authorized dealers is available on the HHT branded websites.
- This warranty is only valid while the HHT appliance remains at the site of original installation.
- This warranty is only valid in the country in which the HHT authorized dealer or distributor that sold the appliance resides.
- Contact your installing dealer for warranty service. If the installing dealer or distributor is unable to provide necessary parts, contact the nearest HHT authorized dealer or supplier. Additional service fees may apply if you are seeking warranty service from a dealer other than the dealer from whom you originally purchased the product.
- Check with your dealer in advance for any costs to you when arranging a warranty call. Travel and shipping charges for parts are not covered by this warranty.
- Limited Catalyst Warranty
 - o For wood burning products containing a catalyst, the catalyst will be warranted for a six-year period to the original purchaser at the site of original installation. The purchaser must provide the name, address, and telephone number of the location where the product is installed, proof of original purchase date, date of failure, and any relevant information regarding the failure of the catalyst.

WARRANTY EXCLUSIONS:

This warranty does not cover the following:

- Changes in surface finishes as a result of normal use. As a heating appliance, some changes in color of interior and exterior surface finishes may occur. This is not a flaw and is not covered under warranty.
- Damage to printed, plated, or enameled surfaces caused by fingerprints, accidents, misuse, scratches, melted items, or other external sources and residues left on the plated surfaces from the use of abrasive cleaners or polishes.
- Repair or replacement of parts that are subject to normal wear and tear during the warranty period are not covered. These parts include: paint, wood and pellet gaskets, firebricks, grates, flame guides, batteries and the discoloration of glass.
- Expansion, contraction, or movement of certain parts causing noise. These conditions are normal and complaints related to this noise are not covered by this warranty.
- Damages resulting from: (1) failure to install, operate, or maintain the appliance in accordance with the installation instructions, operating instructions, and listing agent identification label furnished with the appliance; (2) failure to install the appliance in accordance with local building codes; (3) shipping or improper handling; (4) improper operation, abuse, misuse, continued operation with damaged, corroded or failed components, accident, or improperly/incorrectly performed repairs (5) environmental conditions, inadequate ventilation, negative pressure, or drafting caused by tightly sealed constructions, insufficient make-up air supply, or handling devices such as exhaust fans or forced air furnaces or other such causes; (6) use of fuels other than those specified in the operation instructions; (7) installation or use of components not supplied with the appliance or any other components not expressly authorized and approved by HHT; (8) modification of the appliance not expressly authorized and approved by HHT in writing; and/or (9) interruptions or fluctuations of electrical power supply to the appliance.
- Non-HHT venting components, hearth connections or other accessories used in conjunction with the appliance.
- Any part of a pre-existing fireplace system in which an insert or a decorative gas appliance is installed.
- HHT's obligation under this warranty does not extend to the appliance's capability to heat the desired space. Information is provided to assist the consumer and the dealer in selecting the proper appliance for the application. Consideration must be given to the appliance location and configuration, environmental conditions, insulation and air tightness of the structure.

This warranty is void if:

- The appliance has been over-fired, operated in atmospheres contaminated by chlorine, fluorine, or other damaging chemicals. Over-firing can be identified by, but not limited to, warped plates or tubes, deformation/warping of interior cast iron structure or components, rust colored cast iron, bubbling, cracking and discoloration of steel or enamel finishes.
- The appliance is subjected to prolonged periods of dampness or condensation.
- There is any damage to the appliance or other components due to water or weather damage which is the result of, but not limited to, improper chimney or venting installation.

LIMITATIONS OF LIABILITY

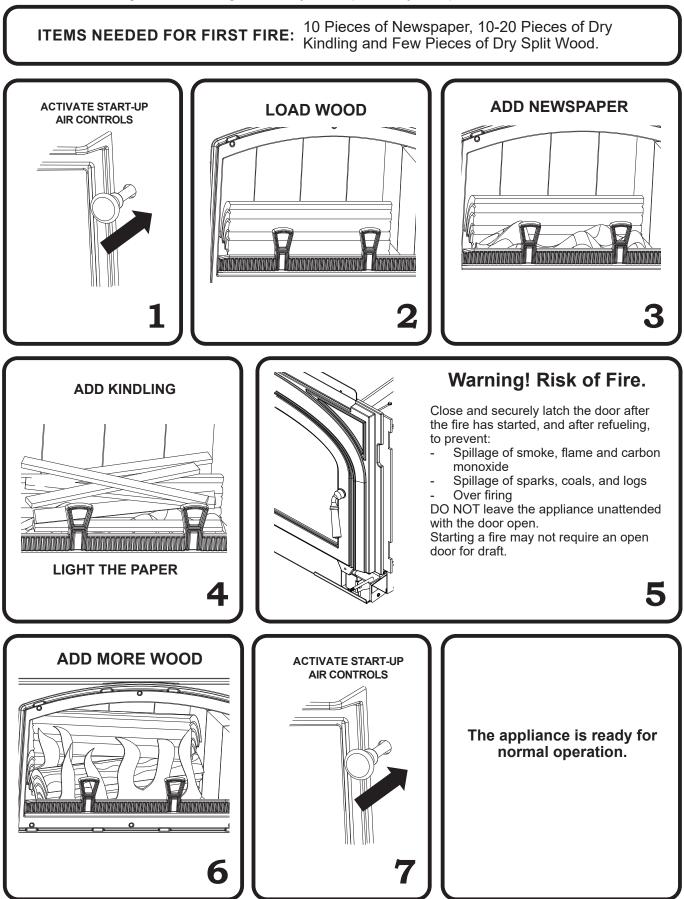

The owner's exclusive remedy and HHT's sole obligation under this warranty, under any other warranty, express or implied, or in contract, tort or otherwise, shall be limited to replacement, repair, or refund, as specified above. In no event will HHT be liable for any incidental or consequential damages caused by defects in the appliance. Some states do not allow exclusions or limitation of incidental or consequential damages, so these limitations may not apply to you. This warranty gives you specific rights; you may also have other rights, which vary from state to state. EXCEPT TO THE EXTENT PROVIDED BY LAW, HHT MAKES NO EXPRESS WARRANTIES OTHER THAN THE WARRANTY SPECIFICED HEREIN. THE DURATION OF ANY IMPLIED WARRANTY IS LIMITED TO DURATION OF THE EXPRESSED WARRANTY SPECIFIED ABOVE.

NOTE: These are generic drawings and may not represent your specific model.

Listing and Code Approvals

A. Insert Safety Certification

Model Number:	MONTP-II-CB & MONTP-II-BM
Laboratory:	OMNI Test Laboratories, Inc.
Report Number:	0061WN100S
Туре:	Solid Fuel Type, Listed Room Heater
Standard:	UL1482-2011 and ULC S628-93 and (UM) 84-HUD.

B. Insert Emissions Certification

Model Number:	MONTP-II-CB & MONTP-II-BM	
Laboratory:	OMNI Test Laboratories, Inc.	
Report Number:	0061WN100E	
Standard:	UL1482-2011	
Can be found at: www.vermontcastings.com/about-us/epa-certification		

C. BTU & Efficiency Specifications

EPA Certification Number:	Number: 199-19	
EPA Certified Emissions:	1.9 grams per hour	
*LHV Tested Efficiency:	77.0%	
**HHV Tested Efficiency:	71.3%	
***EPA BTU Output:	24,700 to 26,800 / hr.	
****Peak BTU/Hour Output:	56,000	
Vent Size:	6 inches	
Firebox Size:	2.37 cubic feet	
Recommended Log Length:	20 inches	
Fuel:	Seasoned Cord Wood	
* Weighted average LHV (Low Heating Value) efficiency using Douglas Fir dimensional lumber and data collected during EPA emission tests in accordance with the requirements of CSA B415.1. LHV assumes the moisture is already in a vapor state so there is no loss in energy to vaporize.		
** Weighted average HHV (High Heating Value) efficiency using Douglas Fir dimensional lumber and data collected during EPA emission tests in accordance with the		

during EPA emission tests in accordance with the requirements of CSA B415.1. HHV includes the energy required to vaporize the water in the fuel.

*** A range of BTU outputs calculated using HHV Efficiency and the burn rates from the EPA tests, using Douglas Fir dimensional lumber.

**** A peak BTU out of the appliance calculated using the maximum first hour burn rate from the High EPA Test and BTU content of seasoned cordwood (8600) times the efficiency.

The MONTP-II-CB & MONTP-II-BM is Certified to comply with 2020 crib wood particulate emission standards.

This wood appliance needs periodic inspection and repair for proper operation. Consult the owner's manual for further information. It is against federal regulations to operate this wood appliance in a manner inconsistent with the operating instructions in the owner's manual.

NOTE: This installation must conform with local codes. In the absence of local codes you must comply with the UL1482-2011, (UM) 84-HUD and NPFA211 in the U.S.A. and the ULC S628-93 and CAN/CSA-B365 Installation Codes in Canada. NOT APPROVED FOR MOBILE HOME INSTALLATIONS IN CANADA!

D. Mobile Home Approved (USA only)

- WARNING: DO NOT INSTALL IN A SLEEPING ROOM.
- <u>CAUTION</u>: THE STRUCTURE INTEGRITY OF THE MOBILE HOME FLOOR, WALL, AND CEILING/ROOF MUST BE MAINTAINED.
- The appliance must be properly grounded to the frame of the mobile home with #8 copper ground wire, and chimney must be listed to UL103 HT or a listed UL-1777 full length six inch (152mm) diameter liner must be used.
- Outside Air Kit, part OAK-ACC must be installed in a mobile home installation.

E. Glass Specifications

This stove is equipped with 5mm ceramic glass. Replace glass only with 5mm ceramic glass. Please contact your dealer for replacement glass.

F. Sleeping Room

When installed in a sleeping room it is recommended that a smoke and/or CO alarm be installed in the bedroom. The size of the room must be at least 50ft³ per 1,000 Btu/hr stove input, if the stove exceeds the room size, outside air must be installed.

G. California - Prop65

<u>/</u>`

WARNING

This product and the fuels used to operate this product (wood), and the products of combustion of such fuels, can expose you to chemicals including carbon black, which is known to the State of California to cause cancer, and carbon monoxide, which is known to the State of California to cause birth defects or other reproductive harm. For more information go to: WWW.P65Warnings.ca.gov

WARNING

Fire Risk.

Hearth & Home Technologies disclaims any responsibility for, and the warranty will be voided by, the following actions:

- Installation and use of any damaged appliance.
- Modification of the appliance.
- Installation other than as instructed by Hearth & Home Technologies.
- Installation and/or use of any component part not approved by Hearth & Home Technologies.
- Operating appliance without fully assembling all components.
- Operating appliance without legs attached (if supplied with unit).
- <u>Do NOT Over fire</u> If appliance or chimney connector glows, you are over firing.

Any such action that may cause a fire hazard.

Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage.

For assistance or additional information, consult a qualified installer, service agency or your dealer.

Hearth & Home Technologies WILL NOT warranty stoves that exhibit evidence of over-firing. Evidence of over-firing includes, but is not limited to:

- Warped air tube
- Deteriorated refractory brick retainers
- Deteriorated baffle and other interior components

NOTE: Hearth & Home Technologies, manufacturer of this appliance, reserves the right to alter its products, their specifications and/or price without notice.

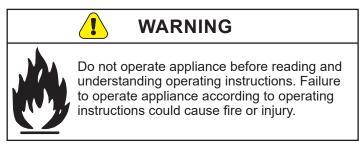

User Guide

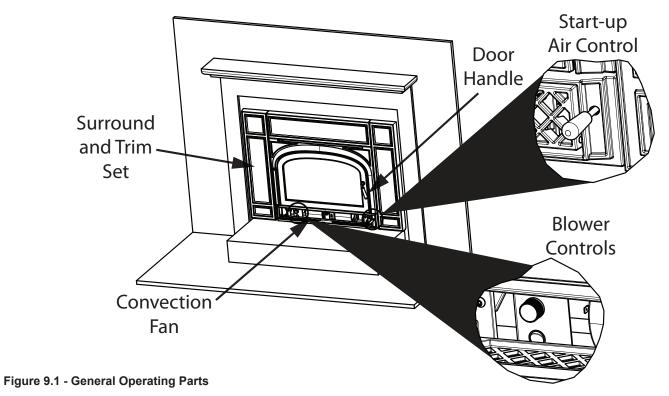

2 Operating Instructions

WARNING
 HOT SURFACES! Glass and other surfaces are hot during operation AND cool down. Hot glass will cause burns. Do not touch glass until it is cooled NEVER allow children to touch glass Keep children away CAREFULLY SUPERVISE children in same room as appliance. Alert children and adults to hazards of high temperatures. High temperatures may ignite clothing or other flammable materials. Keep clothing, furniture, draperies and other flammable materials away.

If you expect that children may come into contact with this appliance, we recommend a barrier such as a decorative screen. See your dealer for suggestions.

A. Your Wood Appliance

B. Fire Safety

To provide reasonable fire safety, the following should be given serious consideration:

- Install at least one smoke detector on each floor of your home to ensure your safety. They should be located away from the heating appliance and close to the sleeping areas. Follow the smoke detector manufacturer's placement and installation instructions, and be sure to maintain regularly.
- 2. A conveniently located Class A fire extinguisher to contend with small fires resulting from burning embers.
- 3. A CO detector should be installed in the room with the appliance.
- 4. A practiced evacuation plan, consisting of at least two escape routes.
- 5. A plan to deal with a chimney fire as follows:
 - In the event of a chimney fire:
 - Evacuate the house immediately
 - Notify fire department.

C. Over firing Your Appliance

WARNING

Fire Risk. Do not over-fire. Over-firing may ignite creosote or will damage , the stove and chimney.

To prevent over-firing your stove, DO NOT:

- Use flammable liquids
- Overload with wood
- Burn trash or large amounts of scrap lumber
- Permit too much air to the fire
- Use of processed solid fuel fire logs

1. Symptoms of Over-Firing

Symptoms of over-firing may include one or more of the following:

- Chimney connector or appliance glowing
- Roaring, rumbling noises
- Loud cracking or banging sounds
- Metal warping
- Chimney fire

2. What To Do if Your Stove is Over-Firing

- Immediately close the door and air controls to reduce air supply to the fire.
- If you suspect a chimney fire, call the fire department and evacuate your house.
- Contact your local chimney professional and have your stove and stove pipe inspected for any damage.
- Do not use your stove until the chimney professional informs you it is safe to do so.

Hearth & Home Technologies WILL NOT warranty stoves that exhibit evidence of over-firing. Evidence of overfiring includes, but is not limited to:

- Warped air tube
- Deteriorated refractory brick retainers
- Deteriorated baffle and other interior components

D. Combustible/Non-combustible Materials Combustible Material

Material made of or surfaced with wood, compressed paper, plant fibers, plastics, or any material capable of igniting and burning, whether flame-proofed or not, plastered or non-plastered.

Non-combustible Material

Material which will not ignite and burn. Such materials are those consisting entirely of steel, iron, brick, tile, slate, glass or plasters, or any combination thereof.

• Non-combustible Sealant Material Sealants which will not ignite and burn: Rutland, Inc. Fireplace Mortar #63, Rutland 76R, Nuflex 304, GE

RTV106 or GE RTB116 (or equivalent).

E. Seasoned Wood

Burn only dry seasoned wood. Store wood under cover, out of the rain and snow. Dry and well-seasoned wood will not only minimize the chance of creosote formation, but will give you the most efficient fire. Even dry wood contains at least 15% moisture by weight, and should be burned hot enough to keep the chimney hot for as long as it takes to dry the wood out - about one hour. It is a waste of energy to burn unseasoned wood of any kind.

Dead wood lying on the forest floor should be considered wet, and requires full seasoning time. Standing dead wood can be considered to be about 2/3 seasoned. To tell if wood is dry enough to burn, check the ends of the logs. If there are cracks radiating in all directions from the center, it is dry. If your wood sizzles in the fire, even though the surface is dry, it may not be fully cured.

Splitting wood before it is stored reduces drying time. Wood should be stacked so that both ends of each piece are exposed to air, since more drying occurs through the cut ends than the sides. This is true even with wood that has been split. Store wood under cover, such as in a shed, or covered with a tarp, plastic, tar paper, sheets of scrap plywood, etc., as uncovered wood can absorb water from rain or snow, delaying the seasoning process.

F. Burning Process

In recent years there has been an increasing concern about air quality. Much of the blame for poor air quality has been placed on the burning of wood for home heating. In order to improve the situation, we at Vermont Castings have developed cleaner-burning wood appliances that surpass the requirements for emissions established by our governing agencies. These wood appliances must be properly operated in order to ensure that they perform the way they are designed to perform.

NOTICE: Improper operation can turn any wood appliance into a smoldering environmental hazard.

1. Kindling or First Stage

It helps to know a little about the actual process of burning in order to understand what goes on inside a appliance. The first stage of burning is called the kindling stage. In this stage, the wood is heated to a temperature high enough to evaporate the moisture which is present in all wood. The wood will reach the boiling point of water (212°F) and will not get any hotter until the water is evaporated. This process takes heat from the coals and tends to cool the appliance.

Fire requires three things to burn - fuel, air and heat. So, if heat is robbed from the appliance during the drying stage, the new load of wood has reduced the chances for a good clean burn. For this reason, it is always best to burn dry, seasoned firewood. When the wood isn't dry, you must open the air controls and burn at a high burn setting for a longer time to start it burning. The heat generated from the fire should be warming your home and establishing the flue draft, not evaporating the moisture out of wet, unseasoned wood, resulting in wasted heat.

2. Second Stage

The next stage of burning, the secondary stage, is the period when the wood gives off flammable gases which burn above the fuel with bright flames. During this stage of burning it is very important that the flames be maintained and not allowed to go out. This will ensure the cleanest possible fire.

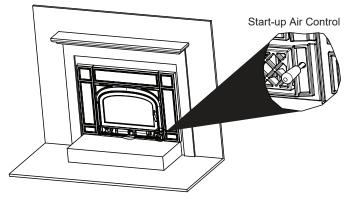

3. Final Stage

The final stage of burning is the charcoal stage. This occurs when the flammable gases have been mostly burned and only charcoal remains. This is a naturally clean portion of the burn. The coals burn with hot blue flames.

It is very important to reload your appliance while enough lively hot coals remain in order to provide the amount of heat needed to dry and rekindle the next load of wood. It is best to activate the start-up air control before reloading (**Figure 11.1**). This livens up the coal bed and reduces excessive emissions (opacity/smoke). Open door slowly so that ash or smoke does not exit appliance through opening. You should also break up any large chunks and distribute the coals so that the new wood is laid on hot coals. Air quality is important to all of us, and if we choose to use wood to heat our homes we should do so responsibly. To do this we need to learn to burn our appliances in the cleanest way possible. Doing this will allow us to continue using our wood appliances for many years to come.

G. Start-Up Air Control

When using the start-up air control system, you do not have to continually monitor the fire. Once you set the startup air control system it will control the fire for you. Follow the instructions below to learn how to operate your stove with ease.

To activate: Push back until it stops

Figure 11.1

H. Burn Rates and Operating Efficiency

WARNING

This wood appliance has a manufacturerset minimum low burn rate that must not be altered. It is against federal regulations to alter this setting or otherwise operate this pellet insert in a manner inconsistent with operating instructions in this manual.

For maximum operating efficiency

1. Burn dry, well-seasoned wood.

ĺ

2. Follow these burn rate instructions below.

Burn Rate

- 1. Starting a Fire:
 - Load appliance with wood and start fire (reference Quick Start Guide on page 6).
 - Activate start-up air control.

2. Reloading:

- Add wood as needed.
- Activate start-up air control.

3. Adjusting the Burn Rate:

The Montpelier II Insert is designed to optimize efficiency at all times. Since there are no user controls to adjust the burn rate, the easiest method is to learn how many logs you need at a time for the amount of heat desired. In addition to the amount of wood and the size of the logs, take the time to experiment with split and unsplit logs as split logs will burn faster than unsplit logs.

NOTE: If using the blower should be off for the first 30 minutes and then be operated in the desired setting at 30 minutes.

I. Wood Fuel

WARNING

Fire Risk.

- DO NOT BURN GARBAGE OR FLAMMABLE FLUIDS SUCH AS GASOLINE, NAPHTHA OR ENGINE OIL.
- Do NOT burn treated wood or wood with
- salt (driftwood). May generate carbon monoxide if burn material other than wood.

May result in illness or possible death.

Hardwood vs Softwood

Your appliance performance depends on the quality of the firewood you use.

- Seasoned wood contains about 8,000 BTUs per pound.
- Hard woods are more dense than soft woods.
- Hard woods contain 60% more BTUs than soft woods.
- Hard woods require more time to season, burn slower and are harder to ignite.
- Soft woods require less time to dry, burn faster and are easier to ignite.
- Start the fire with softwood to bring the appliance up to operating temperature and to establish draft.
- Add hardwood for slow, even heat and longer burn time.

HARDWOODS

SOFTWOODS

Alder	Aspen
Apple	Cedar
Birch	Douglas Fir
Maple	Pine
Oak	Spruce
Poplar	

Table 12.1

Processed Solid Fuel Fire Loas

NOT permitted for use in this appliance

Moisture

- Store wood in dry location.
- Stack wood so both ends are exposed to air.

Wet, unseasoned wood can cause accumulation of creosote.

The majority of the problems appliance owners experience are caused by trying to burn wet, unseasoned wood.

- Wet, unseasoned wood requires energy to evaporate the water instead of heating your home, and
- Causes evaporating moisture which cools your chimney, accelerating formation of creosote.

Seasoned Wood

- Cut loas to size
- Split to 6 inches (152 mm) or less in diameter
- Air dry to a moisture content of not more than 20%
 - Softwood about nine months to dry
 - Hardwood about eighteen months to dry

NOTICE: Seasoning time may vary depending on drying conditions.

Storing Wood

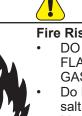

Steps to ensure properly seasoned wood:

- Stack wood to allow air to circulate freely around and through woodpile.
- Elevate wood pile off ground to allow air circulation underneath.
- Smaller pieces of wood dry faster. Any piece over 6 in. (152 mm) in diameter should be split.
- Wood (whole or split) should be stacked so both ends of each piece are exposed to air. More drying occurs through the cut ends than the sides.
- Store wood under cover to prevent water absorption from rain or snow. Avoid covering the sides and ends completely.

Fire Risk Do NOT store wood:

- In front of the appliance.
 - In space required for loading or ash removal.

J. Building A Fire

Before lighting your first fire in the appliance:

- **NOTE:** The special high temperature paint that your appliance is finished with will cure as your appliance heats. You will notice an odor and perhaps see some vapor rise from the appliance surface; this is normal. We recommend that you open a window until the odor dissipates and paint is cured.
- 1. Confirm the baffle and ceramic blanket are correctly positioned. They should be even with the front tube and resting on all tubes **(Figure 13.1 and Figure 13.2)**.
- 2. Remove all labels from glass.

There are many ways to build a fire. The basic principle is to light easily-ignitable tinder or paper, which ignites the fast burning kindling, which in turn ignites the slowburning firewood.

Here is one method that works well:

- 1. Activate start-up air control.
- 2. Place several wads of crushed paper on the firebox floor. Heating the flue with slightly crumpled newspaper before adding kindling keeps smoke to a minimum.
- 3. Lay small dry sticks of kindling on top of the paper.
- 4. Make sure that no matches or other combustibles are in the immediate area of the appliance. Be sure the room is ventilated and the flue unobstructed.
- 5. Light the paper in the appliance. NEVER light or rekindle fire with kerosene, gasoline, or charcoal lighter fluid; the results can be fatal.
- Once the kindling is burning quickly, add several fulllength logs 3 to 4 inches (76 - 102mm) in diameter. Be careful not to smother the fire. Stack the pieces of wood 1/2 to 1 inch apart (13-25mm); near enough to keep each other hot, but far enough away from each other to allow air flow between them.
- 7. Activate the timer system (start-up air controls).
 - This livens up the coal bed and reduces excessive emissions (opacity/smoke).
 - Open door slowly so that ash or smoke does not exit appliance through opening.
 - Large logs burn slowly, holding a fire longer.
 - Small logs burn fast and hot, giving quick heat.
- 8. As long as there are hot coals, repeating steps 6 through 7 will maintain a continuous fire.

Fuel reloading:

- 1. This appliance has a large door with an exceptional view of the fire.
 - Opens to about 90 degrees and has a built-in stop.
 - Door opens 26 inches (660mm) which goes beyond the standard size hearth pad covering the floor in front of the appliance.
 - May want to use a hearth rug in front of the hearth pad to protect the flooring from ash spillage and continuous cleaning of carpet, etc.

- 2. Open door slowly so that ash or smoke does not exit appliance through opening.
 - Check the level of the ash build-up. Remove ash if it reaches the top of the brick covers. Ash should not be spilling over the brick covers onto the ash lip.
 - Any ash or coals on the ash lip can be pressed into the door gasket and shorten the life of the gasket.
 - If the ash is left to accumulate on the ash lip it can interfere with the door closing and/or falling out onto the hearth pad or beyond.

Check the ash level each time you reload.

NOTE: Build fire on brick firebox floor. Do NOT use grates, andirons or other methods to support fuel. It will adversely affect emissions.

Fire Risk. Do NOT store wood:

- Closer than required clearances to combustibles to appliance
- Within space required for loading or ash removal.
- Do NOT operate appliance:
 - With appliance door open.
 - With ash removal system door open.

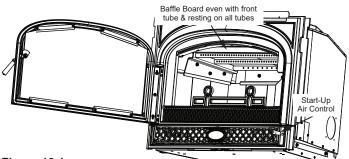

Figure 13.1

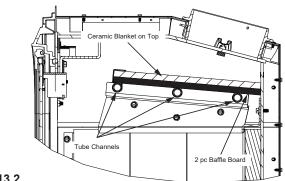

Figure 13.2

WARNING

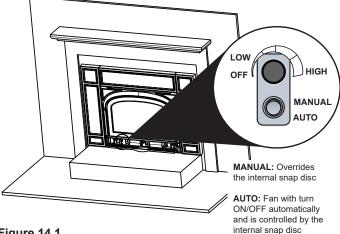

Fire Risk.

- Do NOT burn wet or green wood.
- Store wood in dry location.
 - Stack wood so both ends are exposed to air.

Wet, unseasoned wood can cause accumulation of creosote.

K. Blower Control Box with Snap Disc

- 1. The blower will turn on/off automatically when set to AUTO (Figure 14.1).
- 2. When set to MANUAL, the fan will turn on/off only when you turn it on or off. This setting over-rides the internal snap disc.
- 3. Adjust the speed of the fan by turning the HIGH/LOW knob to the desired setting.

L. Blower Operation

1. Initial (cold) startup:

Push the Start-up Air Control back until it stops. The blower tends to cool the appliance. Leave the blower off until the burn is well established, i.e., 30 minutes.

NOTE: For maximum efficiency and lowest emissions, when operating the blower in either the automatic or manual setting for the blower off until the burn is well established, i.e., 30 minutes.

2. The blower is equipped with five setting switch. Increase blower speed by turning the setting knob clockwise.

M. Opacity (Smoke)

Opacity is the measure of how cleanly your appliance is burning. Opacity is measured in percent: 100% opacity is when an object is totally obscured by the smoke column from a chimney, and 0% opacity means that no smoke column can be seen. As you become familiar with your appliance, you should periodically check the opacity. This will allow you to know how to burn as nearly smoke-free as possible (goal of 0% opacity).

CAUTION

When burning your first fire, you will experience smoke and odor from the appliance resulting from the curing of paint and burning off of any oils remaining from manufacturing.

Open windows during initial burn to dissipate smoke and odors!

- Odors may be irritating to sensitive individuals.
- Smoke detectors may activate.

N. Clear Space

- Do NOT place combustible objects within 4 ft (1.2 m) of the front of appliance (Figure 14.2).
- Mantel:

Avoid placing candles and other heat-sensitive objects on mantel or hearth. Heat may damage these objects.

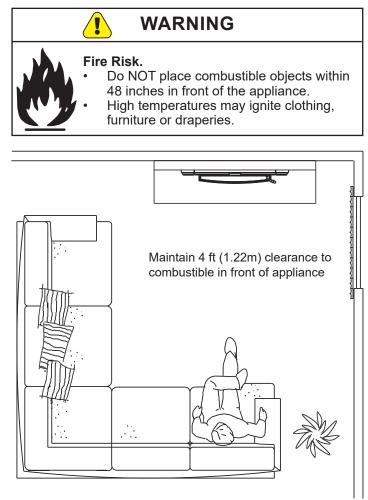

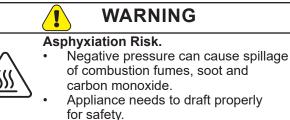

Figure 14.2

O. Negative Pressure

Negative pressure results from the imbalance of air available for the appliance to operate properly. It can be strongest in lower levels of the house.

Causes include:

- Exhaust fans (kitchen, bath, etc.)
- Range hoods
- Combustion air requirements for furnaces, water appliances and other combustion appliances
- Clothes drvers
- Location of return-air vents to furnace or air conditioning
- Imbalances of the HVAC air handling system
 - Upper level air leaks such as:

P. Frequently Asked Questions

- **Recessed lighting**
- Attic hatch
- Duct leaks

To minimize the effects of negative air pressure:

- Install the outside air kit with the intake facing prevailing winds during the heating season
- Ensure adequate outdoor air for all combustion • appliances and exhaust equipment
- Ensure furnace and air conditioning return vents are not located in the immediate vicinity of the appliance
- Avoid installing the appliance near doors, walkways or • small isolated spaces
- Recessed lighting should be a "sealed can" design
- Attic hatches weather stripped or sealed
- Attic mounted duct work and air handler joints and seams taped or sealed

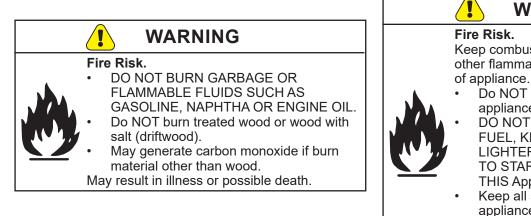

Do NOT operate a circulating fan within close proximity, approximately 4 ft (1.2m), of appliance:

- Can reverse air flow, blowing hot air into appliance cavity.
- Can damage appliance blower due to overheating.

ISSUES	SOLUTIONS		
Odor from appliance	When first operated, this appliance may release an odor for the first several hours. This is caused by the curing of the paint and the burning off of any oils remaining from manufacturing.		
Metallic noise	Noise is caused by metal expanding and contracting as it heats up and cools down, similar to the sound produced by a furnace or heating duct. This noise does not affect the operation or longevity of the appliance.		
Whirring sound	If the blower has been installed, the blower produces a whirring sound which increases in volume as the speed is increased.		

CONTACT YOUR DEALER for additional information regarding operation and troubleshooting. Visit www.vermontcastings.com to find a dealer.

Table 15.1

Keep combustible materials, gasoline and other flammable vapors and liquids clear

- Do NOT store flammable materials in the appliance's vicinity.
 - DO NOT USE GASOLINE, LANTERN FUEL, KEROSENE, CHARCOAL LIGHTER FLUID OR SIMILAR LIQUIDS TO START OR "FRESHEN UP" A FIRE IN THIS Appliance.
 - Keep all such liquids well away from the appliance while it is in use.
 - Combustible materials may ignite.

3 Maintenance and Service

A. Quick Reference Maintenance Guide

When properly maintained, your fireplace will give you many years of trouble-free service. Contact your dealer to answer questions regarding proper operation, troubleshooting and service for your appliance. Visit www.vermontcastings.com/owner-resources to view basic troubleshooting, FAQs, use & care videos.

CAUTION

1

Allow the appliance to completely cool down before performing any cleaning or maintenance. Start the first inspection after the first 2 months of use, or if performance changes, and adjust your schedule accordingly. Maintenance is required for safe operation and must be performed to maintain your warranty.

	FREQUENCY	TASK
Baffle & Blanket	MONTHLY or after every one (1) cord of wood	Baffle and blanket placement is critical to heat output, efficiency and overall life of the appliance. Make sure the baffle is pushed all of the way to the back of the firebox and the blanket is laying flat. Inspect baffle for cracks.
Blower	YEARLY or after every four (4) cords of wood	Vacuum the blower impellers.
Chimney System	EVERY TWO MONTHS or after every four (4) cords of wood	The chimney and chimney cap must be inspected for soot and creosote every two months during the burn season or more frequency if chimney exceeds or is under 14-16 ft (4.3m-4.8m) measured from bottom of appliance. This will prevent pipe blockage, poor draft, and chimney fires. Always burn dry wood to help prevent cap blockage and creosote build-up.
Firebrick & Ash Removal	WEEKLY or after every 25 loads of wood	Ashes must be cool before you can dispose of the ashes in a non- combustible container. Firebrick is designed to protect your firebox. After ashes are removed, inspect the firebrick and replace firebricks that are crumbling, cracked or broken.
Door & Glass Assemblies	WEEKLY or after every 25 loads of wood	Keep door and glass gasket in good shape to maintain good burn. <u>To test:</u> place a dollar bill between the appliance and door and then shut the door. If you can pull the dollar out, remove one washer from door handle behind latch cam and try again. If you can still pull it out, replace the door gasket. Check the glass frame for loose screws to prevent air leakage. Check glass for cracks.
Door Handles	WEEKLY or after every 25 loads of wood	Check the door latch for proper adjustment. This is very important especially after the door rope has formed to the appliance face. Check door handle for smooth cam operation.

Table 16.1

These are generic drawings and may not represent your model.

B. General Maintenance

1. Creosote (Chimney) Cleaning

- Frequency: Every 2 months during heating season or as recommended by a certified chimney sweep; more frequently if chimney exceeds or is under 14-16 ft. (measured from bottom of appliance)
- By: Certified Chimney Sweep

Remove all ash from the firebox and extinguish all hot embers before disposal. Allow the appliance to cool completely. Disconnect flue pipe or remove baffle and ceramic blanket from appliance before cleaning chimney. Otherwise residue can pile up on top of the baffle and ceramic blanket and the appliance will not work properly. (See Baffle Removal on page 23). Close the door tightly. The creosote or soot should be removed with a brush specifically designed for the type of chimney in use. Clean out fallen ashes from the firebox.

It is also recommended that before each heating season the entire system be professionally inspected, cleaned and repaired if necessary.

Inspection:

Inspect the system at the appliance connection and at the chimney top. Cooler surfaces tend to build creosote deposits quicker, so it is important to check the chimney from the top as well as from the bottom.

Formation and Need For Removal:

When wood is burned slowly, it produces tar and other organic vapors which combine with expelled moisture to form creosote.

The creosote vapors condense in the relatively cool chimney flue of a newly-started or a slow-burning fire. As a result, creosote residue accumulates on the flue lining. When ignited, this creosote creates an extremely hot fire which may damage the chimney or even destroy the house.

The chimney connector and chimney should be inspected once every 2 months during the heating season to determine if a creosote or soot buildup has occurred. If creosote or soot has accumulated, it should be removed to reduce the risk of a chimney fire.

WARNING
Fire Risk.
Prevent creosote buildup.
 Inspect chimney connector and
chimney once every two months during
heating season.
 Remove creosote to reduce risk of
chimney fire.
 Ignited creosote is extremely HOT

Fire Risk.

Do not use chimney cleaners or flame colorants in your appliance. Will corrode chimney pipe.

2. Disposal of Ashes

- Frequency: When ash is within 1-3/4 in. (44mm) of firebox lip
- By: Homeowner

Ashes should be placed in a metal container with a tight fitting lid. The closed container of ashes should be placed on a non-combustible floor or on the ground, well away from all combustible materials, pending final disposal. If the ashes are disposed of by burial in soil or otherwise locally dispersed, they should be retained in the closed container until all cinders have thoroughly cooled.

WARNING

Fire Risk. Disposal of Ashes. Ashes should be placed in metal container

- - with tight fitting lid. Do not place metal container on combustible surface.
 - Ashes should be retained in closed container until all cinders have thoroughly cooled.

3. Appliance Inspection

- Frequency: Every 2 months at the same time the chimney and chimney connector are inspected. By: Homeowner

Check for:

- Cracks in glass
- Door handle smooth cam operation
- Baffle and ceramic blanket correct placement
- Baffle for warp-age
- Firebrick for cracks, broken or crumbly
- Door gasket (Dollar bill test): Place a dollar bill between the stove and the door and then shut the door. If you can pull the dollar bill out, replace the door gasket.
- Glass frame for loose screws

4. Glass Cleaning

- Frequency: As desired
- By: Homeowner

CAUTION

Handle glass assembly with care. Glass is breakable.

- Avoid striking, scratching or slamming glass
- Avoid abrasive cleaners
- Do not clean glass while it is hot

Clean glass with a non-abrasive glass cleaner. Abrasive cleaners may scratch and cause glass to crack. If the deposits on the glass are not very heavy, normal glass cleaners work well. Heavier deposits may be removed by using a damp cloth dipped in wood ashes or by using a commercially available oven cleaner.

After using an oven cleaner, it is advisable to remove any residue with a glass cleaner or soap and water. Oven cleaner left on during the next firing can permanently stain the glass and damage the finish on metal surfaces.

A portion of the combustion air entering the firebox is deflected down over the inside of the door glass. This air flow "washes" the glass, helping to keep smoke from adhering to its surface.

6. Inspect Firebrick

- Frequency: After each ash removal
- By: Homeowner

Replace the firebrick if they become crumbly and/or if there is a 1/4 inch (6.35mm) gap between the bricks.

The firebox is lined with firebrick, which has exceptional insulating properties. Do not use a grate; simply build a fire on the firebox floor. Do not operate appliance without firebrick.

- 1. After the coals have completely cooled, remove all old brick and ash from unit and vacuum firebox.
- 2. Remove new brick set from box and lay out to the diagram shown in the instructions that come with the brick set or refer to the diagram on the service parts list at the end of this manual.
- 3. Lay bottom bricks in unit.
- 4. Install rear bricks on the top of the bottom bricks. Slide top of bricks under clip on back of firebox wall and push bottom of bricks back.
- 5. Install side bricks. Slide top of brick under clips on side of firebox and push the bottom of the brick until it is flush with the side of the unit.

5. Cleaning Plated Surfaces

- Frequency: Prior to first burn and then as desired
- By: Homeowner

Clean all the fingerprints and oils from plated surfaces **BEFORE** firing the appliance for the first time. If not cleaned properly before lighting your first fire, the oils can cause permanent markings on the plating.

After the plating is cured, the oils will not affect the finish and little maintenance is required. Wipe clean as needed.

C. Correct Baffle & Blanket Placement

WARNING Fire Risk. Firebox damage due to improper baffle placement is not covered by warranty. Operate the wood burning appliance with the baffle in the correct position only. C Not doing so could result in: Reduced efficiency Overheating the chimnev Overheating the rear of the firebox Poor performance Ceramic Blanket and Baffle Board are NOT in contact Ensure correct baffle placement and replace with the back of the firebox. baffle components if damaged or missing. CAUTION The baffle boards are FRAGILE. Use extreme caution when loading firewood to prevent: Cracking, breaking or damaging the baffle boards DO NOT operate the appliance without baffle boards NOTE: A missing, damaged or improperly positioned baffle is dangerous and may cause damage and poor efficiency. It will also void your warranty. Ceramic Blanket is NOT in contact with the back of the NOTE: These are generic drawings and may not firebox and NOT even with the Baffle Board in the front. represent your specific model. CORRECT POSITION **Back of Firebox** Ceramic Blanket Back of Firebox Ceramic Blanket **Baffle Retainer Bracket** σ Baffle Board Baffle Board Ceramic Blanket and Baffle Board MUST be in contact with the back of the firebox and even with each other in Ceramic Blanket is bunched up at the back of the firebox the front. and NOT even with the Baffle Board in the front. Figure 19.1 - Correct Baffle and Blanket Positions Figure 19.2 - Incorrect Baffle and Blanket Positions

INCORRECT POSITIONS

4 <u>Troubleshooting Guide</u>

With proper installation, operation, and maintenance your wood appliance will provide years of trouble-free service. If you do experience a problem, this troubleshooting guide will assist you or a qualified service person in the diagnosis of a problem and the corrective action to be taken.

Start Fire Problems	Possible Cause	Solution	
	Not enough kindling/paper or no kindling/paper	Use dry kindling, more paper. Arrange kindling and wood for air movement.	
		Check for restricted termination cap	
		Check for blockage of outside air kit; if installed.	
		Check for flue blockage. Pre-warm flue before starting fire (refer to Building A Fire section on page 13).	
	Not enough air for fire to ignite		
Check for adequate vent he Height / Rise and Run see Installation manual).	Check for adequate vent height (refer to Chimney Height / Rise and Run section on page 14 in the <u>Installation manual</u>).		
Can not get fire started Excessive smoke or spillage Burns too slowly Not enough heat output		Open window below the appliance towards the wind.	
Not enough near output	Wood condition is too wet, too large	Use dry, seasoned wood (refer to Seasoned Wood section on page 10).	
	Bed of coals not established before adding wood	Start with paper & kindling to establish bed of coals (refer to Building A Fire section on page 13).	
	Flue blockage such as birds' nests or leaves in termination cap	Have chimney inspected for creosote and cleaned by a certified chimney sweep.	
	Down draft or negative pressure	Do not use exhaust fans during start-up (refer to Negative Pressure section on page 15).	
	Competition with exhaust devices	Open window below the appliance towards the wind.	
		Mix in hardwood.	
	Extremely dry or soft wood	Mix in less seasoned wood after fire is established (refer to Wood Fuel section on page 12).	
Fire burns too fast		Check for correct vent height; too much vertical height creates over drafting.	
	Over drafting	Check location of vent termination (refer to Chimney Termination Requirement section on page 13 of the <u>Installation manual</u>).	

Table 20.1

Service Parts Replacement

A. Glass

NOTE: Replace with 5mm ceramic glass only.

Service Part: SRV7095-054

- 1. Ensure that the fire is out and the appliance is cool to the touch.
- Protect a table or counter top with padding or towels. 2. Protect your hands and wear gloves to prevent injury.
- 3. Remove the door with the broken glass by lifting the door up and off of the hinges.
- 4. Lay door face down on a table or counter making sure the handle hangs over the edge so the door lays flat, on a soft surface.
- Remove the screws from each glass retainer and 5. remove the glass. (If screws are difficult to remove, soak with penetrating oil first).
- 6. Center the glass with edges evenly overlapping the opening in the door, (i.e. same space top and bottom, left and right sides).
- 7. Replace the glass retainers. Be careful not to cross thread the screws.
- 8. Tighten each retainer just a few turns until each is secured. Check again for centering of glass in door frame. Continue to tighten each retainer alternately, a few turns at a time, until the glass is secure.

NOTE: DO NOT OVER TIGHTEN RETAINERS - can cause glass to break.

9. Replace the door on the appliance.

Vermont Castings appliances are equipped with ceramic super heat-resistant glass, which can only be broken by impact or misuse.

WARNING

Injury Risk.

- Use only glass specified in manual.
- DO NOT REPLACE with any
- other material.

	CAUTION!
	Giass Assembly When cleaning glass:
•	Avoid striking, scratching or slamming glass.
•	Do NOT clean glass when hot.
•	Do NOT use abrasive cleaners.
•	Use a hard water deposit glass cleaner on white fi

- ard water deposit glass cleaner on white film.
- Use commercial oven cleaner on heavier deposits.
- Remove all residue of oven cleaner or will permanently stain glass on next firing. Refer to maintenance instructions.

B. Firebrick

Service Part: SRV7095-022

Replace the firebrick if they become crumbly and/or if there is a 1/4 inch (6.35mm) gap between the bricks.

Inspect the firebrick after each ash removal.

The firebox is lined with high quality firebrick, which has exceptional insulating properties. There is no need to use a grate; simply build a fire on the firebox floor. Do not operate appliance without firebrick.

- 1. After the coals have completely cooled, remove all old brick and ash from appliance and vacuum firebox.
- 2. Remove new brick set from box and lay out to diagram shown.
- 3. Lay bottom bricks in appliance.
- 4. Install rear bricks on the top of the bottom bricks. Slide top of bricks under clip on back of firebox wall and push bottom of brick back.
- Install side bricks. Slide top of brick under clips on side 5. of firebox and push the bottom of the brick until it is flush with the side of the appliance.

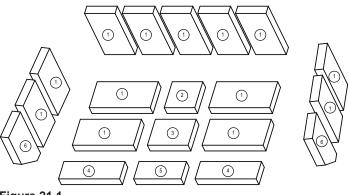

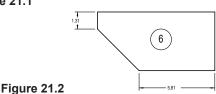

Figure 21.1

Placement **Dimensions Qty Required** 1 9" x 4.5" x 1.25" 13 2 1 4.5" x 4.5" x 1.25" 3 5.75" x 4.5" x 1.25" 1 4 9" x 3" x 1.25" 2 5 7" x 3" x 1.25" 1 6 9" x 4.5" x 1.25" w/Angle 2

Table 21.1

C. Blower

Service Part: SRV7000-868

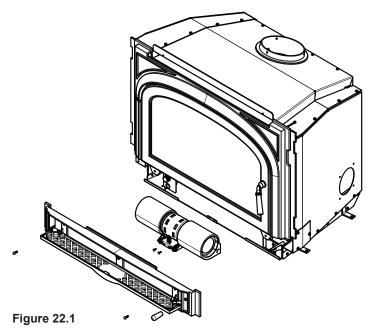

- 1. Ensure that the fire is out and the appliance is cool to the touch.
- 2. Remove the surround by lifting up and off of the appliance; set aside.
- The grille on the blower access assembly is hinged. Swing the grille downward to expose the 2 screws (Figure 22.1).
- 4. Remove the 2 screws from the blower access assembly and slide assembly away from the appliance.
- 5. Disconnect the wires from the blower.
- 6. Remove the 2 screws from the hold down bracket and pull the blower and bracket forward.
- 7. Remove the blower from the hold down bracket.
- 8. Re-install in reverse order. Be certain that the hold down bracket's screws are completely seated in the grommets. Insert the locating tab in the hold down bracket into the placement slot.

CAUTION!

Shock Risk.

Ţ

- Do NOT remove grounding prong
- from plug.
 Plug directly into properly grounded 3 prong receptacle.
- Route cord away from appliance.
- Do NOT route cord under or in front of appliance.

Service Part: SRV230-0470

- 1. Ensure that the fire is out and the appliance is cool to the touch.
- 2. Remove the surround by lifting up and off of the appliance; set aside.

D. Snap Disc

- The grille on the blower access assembly is hinged. Swing the grille downward to expose the 2 screws (Figure 22.2).
- 4. Remove the 2 screws from the blower access assembly and slide assembly away from the appliance
- 5. Remove the 2 mounting screws on the blower assembly and slide assembly towards you.
- Using a Phillips head screw driver, remove the 2 screws from the snap disc and lift the snap disc off of the mounting bracket. Disconnect the wires and replace with new snap disc and re-connect the wires.
- 7. Slide the blower assembly back into position and secure with the 2 mounting screws.

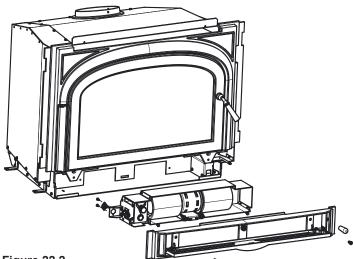

Figure 22.2

E. Baffle Removal

F. Wiring Diagram

Service Part: SRV7095-117

- 1. Remove all ash from the firebox, and extinguish all hot embers before disposal into a metal container.
- It is easier to remove both baffle boards and ceramic blanket after the tube channel assembly has been partially disassembled and the right side lowered. Follow steps 1 through 4 on page 22 for removal of the tube channel assembly. It is not necessary to completely remove the tube channel assembly.
- 3. Once the baffle protection cover has been removed, pull the baffle boards and ceramic blanket forward about 1 inch (25mm) and then overlap the baffles about 1-2 inches (25-51mm) (Figure 23.1).
- 4. Slide the tube channel assembly to the left as far as it will go and lower the right side. Remove the baffle boards and ceramic blanket together (Figure 23.2).
- 5. Re-install in reverse order. Be sure the baffle boards and ceramic blanket are in their proper positions (See Figure 19.1 on page 19).

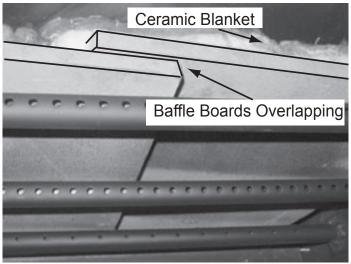

Figure 23.1

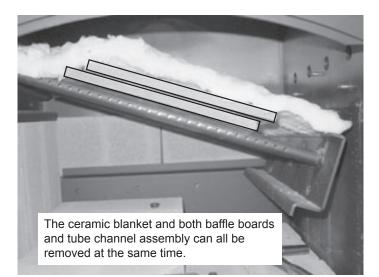

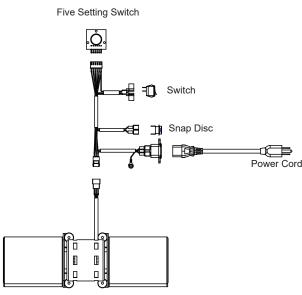

Figure 23.2

Service Part: SRV7000-891

Figure 23.3 Blower

G. Door Handle

Service Part: SRV7101-022

- 1. Install washer on door handle shaft.
- 2. Slide door handle through door.
- 3. Install additional washer(s) as shown in Figure 23.4.
- 4. Install key in groove.
- 5. Align groove in latch cam with key; slide latch cam over shaft
- 6. Install locknut but do not over tighten, the handle needs to move smoothly.
- 7. Install handle turning in a counter-clockwise motion to desired location on door handle rod (Figure 23.4).

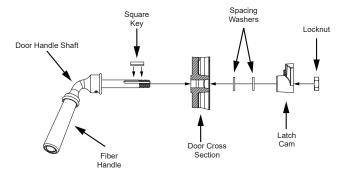

Figure 23.4

CAUTIONDo not over tighten lock nut. The door handle needs to move smoothly.

H. Tube Channel

Service Part: SRV7095-016

Removing Tube Channel Assembly

- 1. Remove the 3 right side bricks.
- Remove the baffle protection channel by bending back the tabs using needle nose pliers located at the right and left side of the protection cover. Lift the cover up slightly and pull toward the front and out of the firebox (Figure 24.2).
- 3. Locate the 2 channel nuts and 2 bolts inside of chamber and remove using a 7/16 socket wrench for the nuts and a 3/8 socket wrench for the bolts (Figure 24.3).

NOTE: Soak the bolts with penetrating oil for at least 15 minutes before trying to remove them.

- 4. Slide the tube channel assembly all the way to left until it is off the threads. Drop the right side down, then slide the assembly back to right (**Figure 24.1**).
- 5. The ceramic blanket and both baffle boards can be removed at the same time you remove the tube channel assembly.
- 6. When the tube channel assembly is free of the left side support, rotate clockwise and pull assembly, blanket and baffles out through the front opening.
- 7. Re-install in reverse order.
